Uric Xtreme Urinal Unblocker - 4 x 5L

Variant code: 06-529

Uric Xtreme Urinal Unblocker is a professional-grade **urinal unblocker and descaler** specifically formulated to dissolve stubborn uric scale, calcium deposits and protein build-up within urinal traps and drainage pipework. Its powerful **phosphoric acid-based formulation** works directly on the deposits responsible for slow-draining and blocked urinals, helping restore normal water flow without the need for mechanical unblocking.

Designed for use in **commercial and industrial washrooms**, this specialist urinal descaler is suitable for ceramic, stainless steel and plastic urinals, including conventional flushing and waterless systems. Its **odourless, non-fuming formulation** contains no sulphuric or hydrochloric acid and is designed to remove accumulated uric scale without damaging compatible urinal surfaces and pipework when used as directed.

Easy to apply directly into the urinal, the **ready-to-use liquid** requires no dilution and begins breaking down uric scale within minutes. Supplied in a convenient **case of 4 x 5L containers**, providing a total of **20 litres**, it offers a practical solution for facilities management teams, cleaning contractors and professional washroom maintenance operations.

Product Features

- **Powerful urinal unblocker** designed to clear blockages caused by uric scale accumulation.
- **Phosphoric acid-based formulation** dissolves calcium and protein deposits within traps and pipework.
- **Fast-acting descaling performance** begins breaking down deposits within minutes.
- **Ready-to-use liquid** requires no dilution or preparation.
- **Odourless, non-fuming formulation** avoids the harsh fumes associated with some conventional drain cleaners.
- **No sulphuric or hydrochloric acid** provides a specialist alternative for urinal descaling.

- **Suitable for multiple urinal types** including flushing, waterless and reduced-flush systems.
- **Compatible with common urinal materials** including ceramic, stainless steel and plastic.
- **Effective within traps and pipework** targets deposits beyond the visible urinal bowl.
- **Case of 4 x 5L** provides a practical bulk supply for professional maintenance.

Product Benefits

- **Restores drainage performance** helps clear slow-running and blocked urinals.
- **Removes stubborn uric scale** tackles the mineral and protein deposits responsible for recurring restrictions.
- **Reduces maintenance disruption** may eliminate the need to dismantle urinal traps or pipework.
- **Time-saving application** allows direct treatment without mechanical cleaning equipment.
- **Versatile urinal compatibility** supports maintenance across different washroom installations.
- **Low-odour treatment** helps minimise disruption in occupied commercial facilities.
- **Cost-effective bulk supply** supports maintenance across multiple washrooms and buildings.

Technical Characteristics

- **Brand:** Uric Xtreme
- **Product Type:** Urinal Unblocker and Descaler
- **Product Form:** Liquid
- **Pack Size:** 4 x 5L
- **Total Volume:** 20L
- **Formulation:** Phosphoric Acid-Based
- **Cleaning Action:** Dissolves Uric Scale, Calcium and Protein Deposits
- **Suitable Urinals:** Ceramic, Stainless Steel and Plastic
- **Suitable Systems:** Conventional Flushing, Waterless and Reduced-Flush Urinals
- **Pipework Compatibility:** Copper and Plastic Pipework, as Specified by the Manufacturer
- **Dilution:** None Required
- **Typical Application Quantity:** Approximately 1–5L per Blockage,

Depending on Severity
- **Shelf Life:** 2 Years
- **Application Method:** Direct Pouring into Urinal or Trap
- **Intended Use:** Professional Urinal Unblocking and Descaling

Applications

Area of Use: Ideal for **commercial washrooms, offices, schools, hospitals, hotels, restaurants, railway facilities, shopping centres, leisure facilities and industrial premises**. Suitable for treating **blocked urinals, slow-draining urinal traps and pipework affected by uric scale build-up**.

How to Use: Apply the product **undiluted** directly into the affected urinal. Start by carefully pouring approximately **1 litre** into the bowl or trough and allow the liquid to reach the trap and pipework. Wait approximately **5 minutes** and repeat if necessary until normal drainage is restored. Depending on the severity of the blockage, approximately **1–5 litres** may be required. Follow the product label for the final flushing procedure. For removable traps, the manufacturer also describes a separate immersion treatment.

Application Considerations: For waterless urinals, remove the cartridge and apply the solution directly into the pipework, avoiding contact with the cartridge. For reduced-flush systems, remove the relevant sleeve or dome before treating the trap. Where a urinal is completely blocked, remove excess standing water where practicable so the product can reach the deposits. Do not use on incompatible materials or combine with other drain cleaning chemicals.

Safety: Acid-based professional cleaning chemical. Read the product label and current Safety Data Sheet before use. Wear the protective gloves, eye protection and other equipment specified in the SDS. Avoid contact with skin and eyes, and do not mix with bleach, alkaline drain cleaners or other chemicals. Store securely in the original container and follow the manufacturer's handling, first-aid and disposal instructions.
