33L Double Bucket Bucket on Wheels (Suitable for Traditional and Flat Mops) - Blue

Variant code: 15-150B

Designed for professional cleaning environments, this double mop bucket on wheels with integrated wringer delivers improved hygiene, better cleaning results and more efficient water use.

The double bucket design separates clean and dirty water during use, significantly reducing the transfer of contaminated water back onto floors. This results in cleaner floors, improved hygiene standards and more consistent cleaning performance compared to single-bucket systems.

The bucket includes a removable insert, allowing it to be used with flat mops for modern cleaning methods. When using conventional mops, such as Kentucky mops, the insert can be easily removed, making the bucket versatile across different cleaning setups and teams.

Because the clean water stays cleaner for longer, water needs changing less frequently. This reduces overall water consumption, saves time for cleaning operatives and supports more sustainable cleaning practices without compromising results.

Fitted with smooth-running wheels, the bucket is easy to manoeuvre around commercial environments, while the durable wringer provides effective mop control with minimal effort. Built for reliability, it is suitable for daily use in offices, education, healthcare, hospitality and retail settings.

Key benefits

- Large 33L maximum capacity (16L Working water capacity)
- Double bucket system keeps clean and dirty water separate
- Cleaner floors due to reduced transfer of dirty water
- Improved hygiene and cleaning
