

38mm High Reach Vacuum Kit – 21' Reach Complete with Hose

Variant code: 16-HLVK3

The AUK Hygiene 38mm High Reach Vacuum Kit provides a practical solution for removing dust from high and hard-to-reach surfaces using a standard 38mm vacuum system. Designed for commercial cleaning environments, the kit allows operators to vacuum walls, ledges, pipework and ducting safely from floor level, reducing reliance on ladders during routine maintenance tasks. AUK Hygiene develops professional cleaning equipment focused on compatibility, durability and practical use within facilities management and contract cleaning sectors.

The system uses **locking extension tubes and angled ABS extensions** to provide controlled reach while maintaining stability during use. Angled connectors allow operators to position brushes more accurately when working along high walls or overhead surfaces. The kit includes **Sidewinder dusting brushes in two sizes** together with hose connection components that allow the system to integrate with compatible 38mm vacuum cleaners. The supplied hose and fittings are designed to work with **almost any Numatic vacuum fitted with a 32/38mm hose connection**, making the kit suitable for use with commonly used commercial vacuum equipment.

Kit Includes:

- 3 × Locking Extending Tubes
- 24" 130° ABS Extension
- 18" 45° ABS Extension
- 8" Sidewinder Dusting Brush
- 18" Sidewinder Dusting Brush
- Steel Hose Cuff Adapter
- 38mm Swivel Cuff
- 2.5m 38mm Vacuum Hose

Product Features

- **High reach vacuum cleaning system** designed for elevated surfaces
- Compatible with standard **38mm vacuum systems**
- Designed to work with **most Numatic commercial vacuum cleaners**

- Locking extension tubes provide secure reach and stability during use
- Angled ABS extensions improve access to awkward overhead areas
- Supplied with Sidewinder dusting brushes for broad surface coverage
- Includes hose, swivel cuff and adapter for connection to vacuum equipment
- Complete kit supplied ready for high-level cleaning tasks

Product Benefits

- Allows operators to remove dust from height while working at floor level
- Improves access to ledges, ducting, beams and high wall surfaces
- Supports safer cleaning procedures by reducing ladder use
- Provides flexibility through interchangeable extensions and brushes
- Helps maintain cleanliness in areas where dust can accumulate overhead
- Compatible with widely used commercial Numatic vacuum equipment

Technical Characteristics

- Designed for use with 38mm vacuum systems
- Locking tube system helps maintain stability during operation
- Angled ABS extensions assist with positioning brushes at height
- Sidewinder brushes provide wider dust removal coverage
- Steel adapter connects the kit to the vacuum hose cuff
- Swivel cuff improves hose movement and reduces twisting

Applications

The 38mm High Reach Vacuum Kit is intended for environments where dust accumulates above normal cleaning height. Typical applications include offices, schools, healthcare buildings, retail environments and public facilities where routine dust removal is required along high walls, ventilation ducting, pipework runs, lighting fixtures and window ledges. The combination of extension tubes, angled connectors and dusting brushes allows cleaning teams to vacuum elevated surfaces more effectively while maintaining compatibility with standard commercial vacuum equipment, including most Numatic models with

38mm hose fittings.
