Cleano High Level Internal Window Cleaning System inc 3 Pads - 6m

Variant code: 14-101560

Save time and safely clean smooth indoor surfaces and windows without the need for buckets and ladders.

Cleano is an innovative telescopic tool, which has been designed to enable easier, faster and safer cleaning of larger and hard to reach windows and flat surfaces.

It uses removable microfibre cleaning pads which efficiently attract and hold dirt particles for a fast, thorough clean and smear-free result without the need for chemicals.

It has a built-in hand operated pump system which is completely mechanical, no need for batteries or potentially dangerous trailing wires, delivering a fine mist directly onto the cleaning surface, minimising water use.

The angled, swivel mop head allows easy access to even the trickiest corners.

Available in 1.4, 3 and 6 metre lengths
