

Cut 3/4 Nitrile Foam Glove – XXXL – Black

Variant code: 22-A621BKRXXXL

Cut 3/4 Nitrile Foam Gloves – Black | High-Performance Precision & Protection

The **Cut 3/4 Nitrile Foam Glove** is the ultimate solution for professionals who refuse to compromise between safety and dexterity. Engineered for high-risk environments where sharp edges and slippery surfaces are part of the daily grind, these gloves provide a **Cut Level 3 (ANSI/ISEA)** protection rating combined with an innovative 3/4 nitrile coating.

The "3/4 dip" design ensures that your palms, fingers, and knuckles are shielded from liquids, oils, and abrasions, while the breathable back allows for extended wear without the discomfort of sweaty hands.

Key Features & Benefits

- **Advanced Cut Resistance:** Knit with high-performance fibres to provide a reliable barrier against scrapes and slices (Cut Level 3).
- **3/4 Nitrile Foam Coating:** The micro-foam nitrile coating extends over the knuckles, offering superior protection against oil penetration and liquid splashes compared to standard palm-dip gloves.
- **Tactile Precision:** The foam texture acts like a "suction cup" on smooth surfaces, providing an unrivaled grip in wet, dry, or oily conditions.
- **Ergonomic Fit:** Designed to mimic the natural curvature of the hand, reducing hand fatigue during long shifts.
- **Sleek Black Aesthetic:** The all-black design hides dirt, grease, and grime, keeping the gloves looking professional for longer.

Ideal Applications

Whether you are in a warehouse or on a construction site, these gloves are built for:

- **Metal Fabrication & Handling**
- **Automotive Assembly & Repair**
- **Construction & Carpentry**
- **HVAC & Plumbing**
- **Glass Handling**
- **General Maintenance**

Specifications

Feature	Details
Material	HPPE / Glass Fiber / Spandex Blend
Coating	Black Nitrile Micro-Foam
Coating Style	3/4 Dip (Knuckle Protection)
Cut Level	Level 3 (Intermediate Protection)
Colour	Black on Black
Cuff Style	Elasticated Knit Wrist

Helpful Hints for Use

- **Size Matters:** A snug fit is crucial for cut resistance. If the glove is too loose, the fabric can snag; if it's too tight, it can overstretch the fibers and reduce protection levels.
- **Storage:** Keep your gloves in a cool, dry place away from direct sunlight. UV rays can degrade the nitrile coating over time.
- **Inspection:** Always inspect your gloves before use. If you see visible tears in the knit or significant peeling of the nitrile, it's time for a fresh pair.

Frequently Asked Questions (FAQ)

Q: What is the difference between a "Palm Dip" and a "3/4 Dip"? A: A palm dip only covers the face of the hand. A **3/4 dip** extends the nitrile coating over the knuckles and sides of the fingers. This provides extra protection against liquids and

scrapes when reaching into tight, oily spaces.

Q: Are these gloves machine washable? A: Yes, they can be washed in cool water with mild detergent. However, we recommend air drying, as high heat in a dryer can shrink the elastic and damage the foam coating.

Q: Can I use these for touchscreen devices? A: While not specifically marketed as "touchscreen gloves," the nitrile foam coating is often thin enough to operate basic capacitive screens, though results may vary based on the device.

Q: Is nitrile better than latex? A: Nitrile is generally more puncture-resistant than latex and is safe for individuals with latex allergies. It also performs significantly better when in contact with oils and petroleum-based products.
