SC Johnson Swarfega ® Protect - Pre-work Hand Barrier Protective Cream - 700ml

Variant code: 10-CRC340

SC Johnson Swarfega ® Protect is a professional protective skin cream designed to provide **effective protection against oil-based and water-based workplace contaminants** in demanding industrial environments. Suitable for use with the Skin Safety Cradle system, the advanced formulation helps protect skin from substances such as oils, grease, lubricants and detergents while supporting skin comfort during daily work activities.

The unique **triple-action formulation** creates a protective barrier against both water-based and non-water-based contaminants while helping improve grip when using handheld tools. The inclusion of **Zinc Salicylate astringent agent** helps tighten the skin surface to improve grip and increase comfort when wearing gloves for prolonged periods.

Formulated with a blend of **emollients, moisturisers and skin conditioners**, the cream helps maintain skin moisture and flexibility while reducing the risk of dryness and cracking. The perfume-free and dye-free composition is suitable for sensitive skin environments and has been independently certified by **ECARF (European Centre for Allergy Research Foundation)** for skin compatibility.

The dermatologist-tested hypoallergenic formula is suitable for use with **latex, vinyl and nitrile gloves** and is also approved for use in food handling environments when used as directed. Designed for industrial workplaces, engineering environments and food production facilities requiring dependable skin protection performance.

Product Features

- Professional **protective skin cream**
- Protects against **oil and water-based contaminants**
- Unique **triple-action formulation**
- Contains **Zinc Salicylate astringent**
