SC Johnson Deb Swarfega Van Cradle Starter Pack - Mobile Skin Care System Including Cartridges - Each

Variant code: 10-SVC01SP

SC Johnson Deb Swarfega Skin Safety Cradle Starter Pack is a **mobile skin care system** designed to provide essential skin protection, cleansing and sanitising products directly at the point of work. Manufactured by SC Johnson Professional, the Swarfega Skin Safety Cradle system is developed for mobile workers, engineers, contractors and service technicians who require convenient access to workplace skin care products away from fixed washroom facilities.

The starter pack contains a **vehicle-mounted cradle** together with **one cartridge each of skin protection cream, hand cleaner and hand sanitiser**, creating a complete skin care solution in a single portable system. Designed for installation in vans and service vehicles, the cradle helps ensure workers have immediate access to essential skin care products throughout the working day.

The robust cradle securely holds the cartridges during transport while allowing quick and convenient dispensing when required. By providing skin protection before work, effective hand cleansing during tasks and sanitising when washing facilities are unavailable, the system supports workplace hygiene programmes and encourages good skin care practices in mobile working environments.

Designed for professional use, the Swarfega Skin Safety Cradle Starter Pack helps organisations promote skin health and hygiene compliance while improving accessibility to essential workplace skin care products. The modular system also allows replacement cartridges to be installed as required, helping maintain continuity of use across field-based operations.

Product Features

- **Mobile skin care system** for vehicle-based workers
- Includes **van cradle mounting system**
