

Dermi Pro Glove – M – Orange/Black

Variant code: 22-AP30O8RM

Dermi Pro Glove – Orange/Black (AP30)

Master wet and oily environments with the **Dermi Pro Glove**, a high-performance safety solution designed for professionals who refuse to compromise on grip or comfort. Featuring a dual-layer coating technology, these gloves provide a 100% liquid-proof barrier while maintaining the tactical sensitivity required for precision handling.

The high-visibility orange shell ensures you stay seen on-site, while the innovative black foam nitrile palm provides a "suction" effect when handling slippery or oil-coated components.

Key Features and Benefits

- **Dual-Nitrile Coating:** A fully dipped smooth nitrile base creates a total barrier against water, oils, and greases, while the secondary **sandy foam nitrile** palm dip offers elite grip in challenging conditions.
- **High-Visibility Safety:** The vibrant orange 13-gauge liner increases hand visibility, essential for signaling and safety in low-light industrial environments.
- **Ergonomic Comfort:** Anatomically designed to mimic the natural curve of the hand, significantly reducing hand fatigue during long shifts.
- **Breathable Performance:** Despite being fully coated, the lightweight liner allows for moisture management, keeping your hands cooler than traditional rubber gloves.
- **Exceptional Durability:** Rated for high abrasion resistance, ensuring a longer product life cycle and better value for money.
- **Secure Fit:** An elasticated knit cuff prevents debris from entering the glove and ensures it stays firmly in place during

heavy-duty movement.

Technical Specifications

Attribute	Details
Material	Polyester, Elastic, Nitrile, Nitrile Foam
Coating	Fully Dipped Smooth Nitrile with Foam Nitrile Palm
Abrasion Level Standards	Level 4 (Highest Rating) EN ISO 21420, EN 388:2016 (4121X), ANSI/ISEA 105 A1
Gauge Application	13-Gauge Seamless Liner Construction, Automotive, Maintenance, Waste Management

Frequently Asked Questions (FAQ)

Q: Are these gloves 100% waterproof?**A:** Yes. The full nitrile dip ensures that liquids, oils, and non-aggressive chemicals cannot penetrate to the skin, making them ideal for "wet work."

Q: Can I use these for touchscreen devices?**A:** While the primary focus is grip and protection, the thin 13-gauge liner and nitrile coating allow for basic touchscreen interaction on most industrial tablets and scanners.

Q: How do these compare to the DermiFlex?**A:** The Dermi Pro is **fully coated** for liquid protection, whereas the DermiFlex is typically palm-dipped for maximum breathability. Choose Dermi Pro if you are submerging your hands or working in very oily conditions.

Pro-Tips & Maintenance

- **The "Oily Grip" Secret:** To get the most out of the foam nitrile palm, ensure you wipe away heavy excess pools of oil from your workpiece. The foam is designed to "channel" thin layers of oil away from the surface to create a dry-contact grip.
- **Avoid Solvent Submersion:** While nitrile is excellent against oils and water, it can degrade if submerged in heavy industrial solvents or paint thinners for extended periods.

- **Sizing Tip:** Because these are fully coated, they have slightly less "stretch" than a palm-dipped glove. If you are at the very top end of a size bracket, consider sizing up for maximum comfort.
