

Dermiflex Aqua Glove – XL – Grey/Black

Variant code: 22-AP62G8RXL

Dermiflex Aqua Glove (Grey/Black) – Superior Grip, Ultimate Waterproof Protection

The **Dermiflex Aqua Glove** is a game-changer for professionals who refuse to let wet conditions slow them down. Designed with a sophisticated blend of comfort and utility, these gloves feature a dual-dipped coating that provides a **360° waterproof barrier** while maintaining the tactile sensitivity required for precision tasks.

Whether you are navigating a rainy construction site, handling oily automotive parts, or managing outdoor landscaping, the Dermiflex Aqua offers the perfect balance of **durability and flexibility**.

Key Features & Benefits

- **Dual-Layer Waterproofing:** The innovative "Aqua" coating ensures your hands stay completely dry, even when submerged or working in heavy rain.
- **Nitril Micro-Foam Grip:** The palm features a specialised sandy finish that provides **unrivalled grip** in both wet and oily conditions, reducing hand fatigue and accidental slips.
- **Ergonomic Fit:** Designed to mimic the natural curvature of the hand, the 15-gauge liner offers a "second-skin" feel, allowing for maximum dexterity.
- **Breathable Tech:** Despite being waterproof, the internal liner is engineered to wick away moisture, keeping your hands cool and comfortable during long shifts.
- **Elasticated Cuffs:** Provides a secure, snug fit that prevents debris and liquids from entering the glove.

Ideal Applications

These gloves are the preferred choice for high-intensity environments, including:

- **Construction & Engineering** (Scaffolding, plumbing, and site work)
- **Automotive** (Handling oily components or washing vehicles)
- **Utilities** (Water treatment and outdoor maintenance)
- **Landscaping** (Working with wet soil or power tools in the rain)
- **Logistics** (Loading/unloading in unpredictable weather)

Technical Specifications

Feature	Details
Material	Nylon/Spandex Liner
Coating	Nitrile Micro-foam (Full Dip + Palm Dip)
Colour	Professional Grey & Black
Grip Finish	Sandy / Anti-Slip
Standards	EN388 (Mechanical Risks), EN ISO 21420

Frequently Asked Questions (FAQ)

Are these gloves fully waterproof or just water-resistant?

The Dermiflex Aqua is **fully waterproof**. The dual-dipped nitrile coating covers the entire hand, ensuring no liquid penetrates through to your skin.

Can I use these for touchscreen devices?

While primarily designed for mechanical protection, the thin micro-foam coating often allows for basic touchscreen interaction, though it is not a dedicated "touch" glove.

How do I clean my Dermiflex Aqua gloves?

We recommend hand washing with mild detergent and air drying. Avoid high-heat tumble dryers, as excessive heat can damage the nitrile coating.

Are they suitable for handling chemicals?

While nitrile offers good resistance to oils and

greases, these are primarily **physical protection gloves**. For hazardous chemical handling, please consult a specific chemical resistance chart (EN374).

Pro-Hints for Longevity

Rotation is Key: If working in extreme conditions, keep two pairs. Rotate them to allow one pair to fully air out while you use the other.

Size Matters: A glove that is too tight will wear out faster at the fingertips; one that is too loose reduces grip efficiency. Check the size guide before purchasing.

Storage: Store them away from direct sunlight and UV rays to prevent the nitrile coating from becoming brittle over time.
