

## DermiFlex Ultra Plus Glove – L – Grey/Black

Variant code: 22-A353G8RL

## DermiFlex Ultra Plus Glove – Grey/Black

**The Ultimate Fusion of Precision, Protection, and Breathability.**

When your hands are your most valuable tools, compromising on protection isn't an option. The **DermiFlex Ultra Plus Glove** in Grey/Black is engineered for professionals who demand high-dexterity performance without sacrificing comfort. Featuring a cutting-edge **micro-foam nitrile coating**, these gloves offer unparalleled grip in dry, damp, or oily conditions, making them the gold standard for precision handling.

Whether you're in construction, automotive repair, or intricate assembly, the DermiFlex Ultra Plus provides a "second skin" feel that reduces hand fatigue and keeps you productive throughout the longest shifts.

### Key Features & Benefits

- **Superb Breathability:** The ultra-thin 15-gauge nylon and elastane liner allows for 360° breathability, keeping hands cool and dry even in high-intensity environments.
- **Micro-Foam Grip Technology:** The specialised nitrile coating provides a superior grip while maintaining tactile sensitivity, allowing you to handle even the smallest screws or components with ease.
- **Enhanced Durability:** Reinforced at the palm and fingertips, the DermiFlex Ultra Plus is designed to withstand abrasion and outlast standard dipped gloves.
- **Ergonomic Fit:** Anatomically designed to mimic the natural curve of the hand, reducing muscle strain and increasing comfort for all-day wear.
- **DMF-Free & Skin Friendly:** Manufactured

with the health of the wearer in mind, ensuring reduced risk of skin irritation or chemical sensitivity.

## Technical Specifications

Feature	Specification
<b>Material</b>	Nylon, Elastane, Micro-foam Nitrile
<b>Colour</b>	Grey Liner / Black Coating
<b>Gauge</b>	15 Gauge (Ultra-Fine)
<b>Coating Type</b>	Palm Dipped
<b>Resistance</b>	High Abrasion & Tear Resistance
<b>Applications</b>	Maintenance, Logistics, Engineering, DIY

## FAQ: Everything You Need to Know

### **Are these gloves touch-screen compatible?** Yes!

The thin, conductive nature of the micro-foam nitrile allows for basic smartphone and tablet interaction without needing to remove your gloves.

**Can I wash the DermiFlex Ultra Plus?** We recommend a gentle hand wash with mild detergent and air-drying. Avoid high heat or tumble drying, as this can degrade the nitrile coating.

**Are they suitable for heavy chemical handling?** While these gloves offer excellent resistance to oils and greases, they are not designed as primary chemical-resistant gloves. For immersion in harsh chemicals, please consult a dedicated chemical protection range.

**How do I find my size?** Measure the circumference of your palm just below the knuckles. Our sizes range from Small (7) to XXL (11) to ensure a snug, safe fit.

## Professional Hints & Maintenance Tips

- **The "Snug" Rule:** For precision work, choose a size that feels slightly tight initially. The elastane liner will mold to your hand shape after about 30 minutes of wear.
- **Storage:** Keep your gloves out of direct sunlight when not in use. UV rays can cause the nitrile coating to become

brittle over time.

- **Rotation:** If you work in particularly oily environments, rotate between two pairs. This allows the fibres of one pair to "rest" and remain more breathable.

## Why Choose DermiFlex Ultra Plus?

In a market flooded with "disposable" quality workwear, the DermiFlex Ultra Plus stands out by balancing **longevity** with **sensitivity**. It's not just a glove; it's an upgrade to your workday efficiency.
