

Double Dipped Latex Gauntlet – XL – Yellow/Blue

Variant code: 22-A801Y4RXL

Double Dipped Latex Gauntlet – Yellow/Blue

Experience heavy-duty protection and superior chemical resistance with our **Double Dipped Latex Gauntlet**. Designed for demanding environments, this gauntlet features a dual-layered construction – a vibrant **yellow body with a blue sand-textured palm** – to provide an extra barrier against liquids, detergents, and mild chemicals.

From industrial cleaning and janitorial tasks to food processing and laboratory work, these gauntlets are the gold standard for waterproof, durable hand protection.

Key Features and Benefits

- **Double Dipped Construction:** The dual-layer process significantly increases durability and extends the life of the glove, offering better protection against abrasions and punctures than single-dipped alternatives.
- **Enhanced Grit Grip:** The blue palm is finished with a **sanded texture**, ensuring a secure, non-slip grip even when handling wet, soapy, or slippery objects.
- **Liquid-Proof Protection:** 100% waterproof design with an extended gauntlet cuff to protect the wrists and lower forearms from splashes and chemical contact.
- **Cotton Flock Lining:** The interior is lined with soft cotton flock to absorb perspiration, making the gauntlets easy to pull on and off while providing comfort during extended use.
- **Anatomic Design:** Shaped to follow the natural curve of the hand, reducing hand fatigue and improving dexterity for manual handling tasks.

- **High Visibility:** The bright yellow and blue colour scheme ensures high visibility, which is essential for safety in busy industrial or warehouse environments.

Technical Specifications

Attribute	Details
Material	High-Quality Natural Rubber Latex
Lining	Soft Cotton Flock Lined
Grip Type	Sanded/Grit Textured Palm
Length	300mm (Approx. 12 inches) for forearm protection
Standards	EN ISO 21420, EN 388 (Mechanical), EN 374 (Chemical)
Colour	Yellow (Sleeve) / Blue (Palm)

Frequently Asked Questions (FAQ)

Q: Are these gloves safe for food handling?

A: Yes, these latex gauntlets are generally suitable for food processing and preparation areas, provided they are cleaned thoroughly between uses to prevent cross-contamination.

Q: Do these protect against strong acids?

A: These gauntlets offer resistance to many mild chemicals and detergents. However, always consult the **EN 374 chemical breakthrough chart** specifically for the chemicals you are using to ensure your safety.

Q: Can these be used by people with latex allergies?

A: No. Because these are made of natural rubber latex, they should be avoided by individuals with Type I or Type IV latex sensitivities. We recommend a Nitrile alternative for those users.

Hints & Maintenance Tips

- **Rinse After Use:** To prolong the life of the rubber, rinse the exterior of the gloves with clean water after contact with chemicals or soaps to prevent material degradation.

- **Drip Dry Inside-Out:** If water gets inside the flock lining, turn the gloves inside out to dry. This prevents odours and bacterial growth.
- **The "Fold" Trick:** When working with liquids overhead, fold the cuff of the gauntlet back an inch. This creates a "catch-basin" that prevents liquids from running down your arms.
- **Storage:** Keep away from direct sunlight and ozone sources (like electric motors), as these can cause the latex to crack over time.
