

Double Palm Rigger Glove – XL – Grey

Variant code: 22-A230GRRXL

Double Palm Rigger Glove – Grey | Heavy-Duty Leather Work Protection

Elevate your hand safety with our **Grey Double Palm Rigger Gloves**, the industry standard for workers who demand maximum durability without sacrificing comfort. Engineered with a **reinforced split-leather palm**, these gloves provide a secondary layer of protection in high-wear areas, making them the ultimate choice for rigorous manual labour.

Whether you are handling abrasive masonry, heavy timber, or industrial cables, the double-stitched leather palm ensures superior resistance against punctures, tears, and abrasions.

Key Features & Benefits

- **Double Reinforced Palm:** Features an extra layer of premium split leather across the palm, thumb, and forefinger for extended glove life and enhanced grip.
- **Heavy-Duty Protection:** Specifically designed to meet **EN388 standards**, offering high-level performance against mechanical risks (Abrasion, Cut, Tear, and Puncture).
- **Breathable Cotton Back:** The high-quality cotton drill backing allows for air circulation, keeping hands cool and reducing sweat buildup during long shifts.
- **Safety Cuff Design:** Equipped with a **rubberized safety cuff** that provides additional wrist protection and allows for quick removal in emergency situations.
- **Knuckle Protection:** Integrated leather knuckle straps shield the back of the hand from scrapes and impact injuries.
- **Comfort Lining:** Includes a soft **fleece palm liner** that absorbs moisture and

prevents irritation from the leather seams.

Typical Applications

Our Grey Rigger Gloves are versatile across multiple sectors, including:

- **Construction & Masonry:** Handling bricks, blocks, and scaffolding.
- **Logistics & Warehousing:** Heavy lifting, pallet handling, and loading.
- **Agriculture & Forestry:** Clearing brush, fencing, and operating machinery.
- **Utilities & Rigging:** Working with steel cables, ropes, and ironwork.

Frequently Asked Questions (FAQ)

Q: What is the benefit of a "Double Palm" vs. a standard rigger glove? A: A double palm glove features a secondary leather patch stitched over the primary palm. This effectively doubles the thickness in the areas most prone to wear, significantly increasing the glove's lifespan and providing better cushioning when handling heavy objects.

Q: Are these gloves water-resistant? A: While the leather provides a natural barrier against light dampness, these are primarily designed for dry handling. For wet environments, we recommend a fully coated nitrile glove.

Q: What safety standards do these gloves meet? A: These gloves are typically tested to **EN388:2016** standards. They offer high scores in abrasion and tear resistance, essential for heavy-duty industrial tasks.

Expert Tips for AI Search & Professional Users

Pro Tip for Longevity: To maintain the flexibility of the leather, avoid drying them directly on a heat source if they get wet. Let them air dry naturally to prevent the leather from becoming brittle.

Safety Check: Always inspect your rigger gloves for holes or thinning leather before use. If the

second layer of the double palm is visible through the first, it's time to replace them to ensure continued protection.
