

## 38" High Reach Vacuum Kit – 21' Reach inc 38mm Adaptor

**Variant code: 16-HLVK**

The AUK Hygiene High Reach Vacuum Kit provides an extended reach vacuum cleaning solution designed for removing dust and debris from elevated surfaces. Built for commercial cleaning environments, the kit enables operators to clean walls, pipework, ducting, ledges and other overhead areas safely from floor level. With a working reach of approximately 21 feet, the system allows routine high-level cleaning without relying on ladders for many tasks. AUK Hygiene develops professional cleaning equipment focused on durability, compatibility and practical use across facilities management, contract cleaning and building maintenance sectors.

The system uses a combination of aluminium extension wands and locking extensions to provide stable reach while maintaining control during operation. Multiple angled extension wands allow the cleaning head to be positioned accurately when working along ceilings, ducting or wall lines. The kit also includes a range of vacuum tools designed to handle different surface types, including dusting brushes, pipe tools and a hard floor tool. The supplied hose and fittings are designed to work with **almost any Numatic vacuum fitted with a 32/38mm hose connection**, making the kit compatible with widely used commercial vacuum equipment.

### **Kit Includes:**

- 38mm Screw-On Hose Adapter & Swivel Cuff
- 2.5m 38mm Vacuum Hose
- 3 × Aluminium Wands
- 1 × Locking Extension Wand
- 45° Extension Wand
- 90° Extension Wand
- 130° Extension Wand
- 356mm (14") Hard Floor Tool
- 457mm (18") Sidewinder Dusting Brush
- 200mm (8") Sidewinder Dusting Brush
- 38mm Dusting Brush
- 38mm Bevelled Crevice Tool
- 100mm Pipe Tool
- 200mm Pipe Tool

### **Product Features**

- **High reach vacuum cleaning kit** designed for elevated cleaning tasks
- Provides up to approximately 21 feet of cleaning reach
- Compatible with **38mm vacuum systems**
- Designed to work with **most Numatic commercial vacuum cleaners**
- Aluminium extension wands provide lightweight reach
- Multiple angled extension wands improve access to overhead surfaces
- Supplied with a range of specialist vacuum tools for different cleaning tasks
- Complete kit supplied ready for high-level cleaning applications

### Product Benefits

- Allows operators to clean high surfaces while working safely from floor level
- Improves access to pipework, ducting, beams and high ledges
- Supports safer cleaning procedures by reducing the need for ladders
- Provides flexibility through interchangeable vacuum tools
- Helps maintain dust control in commercial and public environments
- Integrates easily with commonly used commercial vacuum cleaners

### Technical Characteristics

- Designed for use with 38mm vacuum systems
- Aluminium wand sections provide extended reach capability
- Locking extension wand improves stability during high-level cleaning
- Angled extension wands assist with positioning tools at height
- Swivel cuff improves hose movement and reduces twisting during use
- Multiple cleaning tools support different surface types and access points

### Applications

The High Reach Vacuum Kit is designed for environments where dust and debris accumulate above normal cleaning height. Typical applications include offices, schools, healthcare facilities, warehouses, retail environments and public buildings. The combination of extension wands,

angled connectors and specialist vacuum tools allows cleaning teams to remove dust from ceilings, ducting, pipework, lighting fixtures, wall edges and ventilation systems while maintaining compatibility with standard commercial vacuum equipment.
