Hot Glove Heat Resistant Glove Up to 250°C - 9

Variant code: 22-HG-9

Hot Glove: Ultimate Heat Resistant Kitchen & BBQ Glove (Up to 250°C)

Tired of bulky, stiff oven mitts that make you feel like you're wearing boxing gloves while trying to handle a delicate soufflé? Meet the **Hot Glove**—the perfect blend of heavy-duty protection and tactile precision.

Engineered for the modern kitchen and the weekend grill master, this glove offers **certified heat resistance up to 250°C (480°F)**. Whether you are pulling a searing cast-iron skillet from the oven or rearranging logs in a fire pit, the Hot Glove ensures your hands stay cool under pressure.

Key Features & Benefits

- **Extreme Heat Protection:** Safely handle hot items up to **250°C**. Ideal for baking, grilling, smoking, and campfire cooking.

  Five-Finger Precision: Unlike traditional mitts, the five-finger design allows for a natural grip, making it easier to handle tongs, skewers, and small handles.

- **Non-Slip Silicone Grip:** Each glove is patterned with high-traction silicone to ensure your expensive cookware stays firmly in your grasp.

- **Ambidextrous & Universal Fit:** Designed to fit either the left or right hand comfortably. One size fits most!

- **Breathable Cotton Lining:** The interior is lined with soft, breathable cotton to prevent sweating and ensure comfort during long BBQ sessions.

- **Extra-Long Cuff:** Provides extended protection for your wrists and forearms against oven racks and stray sparks.

Technical Specifications

Email: info@aukhygiene.com

Feature	Specification
Temperature Limit	250°C (480°F) for intermittent contact
Material	Aramid Fibre outer, Silicone grip, Cotton inner
Washability	Machine Washable (Air dry recommended)
Standard	EN407 Certified Heat Resistance

Hints & Pro-Tips for Best Use

- **Dry is Best:** Never use the Hot Glove when it is wet. Water conducts heat significantly faster than air, which can lead to steam burns.
- **The "Double Up":** If you are carrying a heavy, piping-hot Dutch oven across the kitchen, we recommend using a pair of Hot Gloves for maximum stability and safety.
- **Beyond the Kitchen:** These aren't just for cooking! Use them for changing hot lightbulbs, handling fireplace tools, or even removing a hot radiator cap in an emergency.

Frequently Asked Questions (FAQ)

Q: Can I use these to touch open flames?

A: While the material is flame-resistant and won't catch fire easily, the Hot Glove is designed for **contact heat**. You should not hold your hand directly in an active flame for any extended period.

Q: Is the glove waterproof?

A: No. The Hot Glove is made of breathable woven fibres. It will not protect against hot liquids (boiling water) or steam.

Q: How do I clean my Hot Glove?

A: Simply toss it in the washing machine with your regular laundry. We recommend air drying to preserve the integrity of the silicone grips.

Q: Does this come as a single glove or a pair?

A: This product is typically sold as a **single glove**
