Hydrosoft Granular Salt - 25kg

Variant code: 04-405

Hydrosoft Granular Salt is a **high-purity water softener salt** designed to provide consistent brine production and reliable regeneration in compatible water softening systems. Manufactured from purified vacuum salt, it consists of **rounded crystalline salt beads** that dissolve readily in water, helping water softeners operate efficiently and maintain their ability to remove hardness minerals from the water supply.

Each granular bead is grown from individual salt crystals, creating a **uniform, free-flowing structure** that supports consistent brining. The rounded granules are easy to pour into a water softener's salt compartment, reducing handling difficulties and helping minimise the risk of salt clumping or mushing. With a typical **granule size of 1–2mm**, the salt disperses easily and dissolves efficiently to produce the brine required for regeneration.

Suitable for **domestic and commercial water softeners** designed to use granular salt, Hydrosoft is also suitable for compatible dishwashers and specialist commercial swimming pool chlorine generation equipment. Its **high-purity formulation** makes it a versatile choice for applications requiring clean, consistent salt. Supplied in a **25kg bag**, it provides a practical solution for regular water softener maintenance in homes, workplaces and commercial facilities.

Product Features

- **High-purity granular salt** manufactured from purified vacuum salt
- **Rounded crystalline beads** grown from individual salt crystals
- **Consistent brining performance** for compatible water softening systems
- **Free-flowing granules** allow easy pouring and replenishment
- **1–2mm bead size** supports even dispersion and rapid dissolution
- Designed for **water softener regeneration**
- Helps minimise **salt mushing and handling difficulties**
- **High-purity composition** supports the

production of clean brine
- Suitable for **domestic and commercial granular salt water softeners**
- Can be used in **compatible dishwashers** requiring granular salt
- Meets demanding purity requirements for **specialist commercial swimming pool membrane electrolysis equipment**
- Also suitable for appropriate **winter de-icing applications**
- Supplied in a convenient **25kg bag**

Product Benefits

- **Consistent brine production** supports reliable water softener regeneration
- **Effective water softening support** helps maintain the system's ability to reduce hardness minerals
- **Free-flowing bead design** makes replenishing the salt compartment straightforward
- **Rapid dissolution** helps produce the brine needed for regeneration cycles
- **Reduced mushing** helps maintain salt movement within compatible brine tanks
- **High-purity salt** helps limit unwanted insoluble deposits from the salt itself
- **Uniform granule size** promotes predictable dissolution and brining performance
- **Versatile compatibility** makes it suitable for several specialist water treatment applications
- **Practical maintenance** helps keep water softening systems supplied with regenerating salt
- **Bulk bag format** provides a convenient supply for regular replenishment

Technical Characteristics

- **Brand:** Hydrosoft
- **Product Type:** Granular Water Softener Salt
- **Material:** Purified Vacuum Salt
- **Primary Component:** Sodium Chloride (NaCl)
- **Physical Form:** Rounded Crystalline Granules
- **Granule Size:** Approximately 1–2mm
- **Appearance:** White Crystalline Salt
- **Pack Weight:** 25kg
- **Packaging Format:** Bag
- **Primary Application:** Regeneration of Compatible Water Softening Systems

Tel: 01626 355177
Email: info@aukhygiene.com

- **Brining Performance:** Consistent Dissolution and Brine Formation
- **Flow Properties:** Free-Flowing Granules for Easy Replenishment
- **Manufacturing Process:** Vacuum Salt Production with Crystalline Bead Formation
- **Additional Applications:** Compatible Dishwasher Salt Systems, Specialist Swimming Pool Membrane Electrolysis Equipment and Suitable De-Icing Applications
- **Water Softener Compatibility:** Equipment Specified for Granular Salt
- **Application Method:** Pour into the Appropriate Salt or Brine Compartment
- **Dosage:** Follow the Water Softener or Equipment Manufacturer's Instructions
- **Replenishment:** Check Salt Levels Regularly and Refill as Required
- **Handling:** Use Appropriate Manual Handling Procedures for a 25kg Bag
- **Quantity:** Each
- **Storage:** Store in a Cool, Dry, Covered Area and Protect from Moisture
- **Precaution:** Confirm Equipment Compatibility Before Use

Applications

Ideal for **granular salt water softeners** in homes, offices, hotels, commercial premises and water treatment facilities. Also suitable for **compatible dishwashers and specialist swimming pool chlorine generation systems** requiring high-purity granular salt.
