Inspec Grip Gloves with Grip Dots - White - 7

Variant code: 22-G505/7

Inspec Grip Gloves with PVC Grip Dots: The Ultimate Precision Handling Solution

The **Inspec Grip Glove** is the professional standard for tasks requiring a delicate touch without sacrificing a secure hold. Crafted from a high-quality **polycotton seamless knit**, these gloves are designed for "white-glove" inspection work where surface protection and enhanced tactile feedback are critical.

Whether you are working in quality control, light assembly, or general warehousing, the integrated **PVC grip dots** provide the mechanical friction needed to handle smooth or slippery items with total confidence.

Key Features & Benefits

- **Enhanced PVC Traction:** Features high-density PVC grip dots on the palm side, providing **exceptional grip** for general handling and reducing hand fatigue by minimising the effort needed to hold objects.
- **Seamless Polycotton Comfort:** The **seamless knit construction** prevents irritation and chafing, making these gloves comfortable enough for full-shift wear.
- **Breathable Design:** The polycotton blend allows for superior airflow, keeping hands cool and dry even during repetitive high-speed tasks.
- **Surface Protection:** Ideal for inspection roles, these gloves prevent fingerprints, oils, and sweat from contaminating sensitive surfaces like glass, electronics, or polished metal.
- **High Dexterity:** The lightweight fabric allows for maximum fingertip sensitivity, ensuring you can feel small components or defects during the inspection process.

Technical Specifications

Feature	Detail
Material	Premium Polycotton Blend
Grip Type	Raised PVC Dots (Single-Sided)
Construction	13-Gauge Seamless Knit
Colour	Professional White/Blue (or White/White)
Application	Inspection, Light Assembly, Warehousing

Pro-Tips for Better Handling

- **The "One-Side" Advantage:** Because the dots are only on one side, these gloves remain highly flexible. If you need a smooth surface for a specific task, you can momentarily use the back of the hand without sacrificing fit.
- **Component Sorting:** Use these for sorting small plastic or metal parts. The PVC dots act like "micro-suction," allowing you to pick up flat items from smooth surfaces much faster than with bare hands.
- **Avoid High Heat:** Since the grip dots are made of PVC, avoid contact with hot surfaces (above **60°C**) to prevent the dots from softening or smearing.

Frequently Asked Questions (FAQs)

Q: Do these gloves leave "lint" on products?A: These are low-linting polycotton gloves designed specifically for inspection. While not "lint-free" like specialised nylon cleanroom gloves, they are significantly cleaner than standard cotton work gloves.

Q: Can these be used for heavy lifting?A: These are **light-duty inspection gloves**. While the PVC dots provide great grip, they are not designed for heavy construction or abrasive masonry work. For those tasks, we recommend our **TPV Impact** or **Liquid Pro** ranges.

Q: Are they ambidextrous?A: Because the PVC dots are applied to one side to maximise palm grip, they are specifically shaped for Left and Right hands. Ensure you wear the dotted side toward
