Jersey Liner Glove (300 Pairs) - M - Natural

Variant code: 22-A040NLRM

Jersey Liner Glove (Bulk 300 Pairs) – XL – Natural: The Ultimate Protective Barrier

Experience the perfect blend of traditional comfort and high-tech liquid resistance with our **Jersey Liner Glove in XL Natural**. This isn't just a standard liner; it is a high-performance solution designed for heavy-duty industrial use and high-volume environments.

By utilising **innovative liquid-repellent technology**, these gloves are engineered to handle the toughest conditions. Whether you are dealing with water, grease, or **heavy oils**, this glove ensures liquids roll right off the surface rather than soaking through, keeping the underlying surface (and your hands) completely protected.

Why the Jersey Liner Glove Stands Out

- **Advanced Liquid Repellency:** Unlike standard cotton liners, our innovative coating ensures that **liquids roll off** the fabric, providing a superior barrier against moisture and oils.
- **Dual-Layer Thermal Regulation:** The unique **twin liner** design is a game-changer. It effectively **traps heat** for warmth in cooler environments while maintaining high **breathability** to prevent sweat buildup.
- **Superior Sandy Palm Grip:** Finished with a specialised **sandy palm texture**, these gloves provide an enhanced, non-slip grip, making them ideal for handling tools or oily components with precision.
- **Bulk Value Pack:** Supplied in a **300-pair bulk carton**, these are the most cost-effective choice for large-scale operations, warehouses, and construction sites.
- **Ergonomic XL Fit:** Designed specifically in Size XL to ensure a comfortable, non-

restrictive fit for larger hands, reducing hand fatigue during long shifts.

Product Specifications

Attribute	Detail
Quantity	Bulk Pack (300 Pairs)
Size	XL (Extra Large)
Colour	Natural / Cream
Technology	Hydrophobic & Oleophobic Coating
Grip Type	Sandy Palm Finish
Liner Type	Breathable Twin-Liner

Pro-Tips for Maximum Performance

- **Layering Strategy:** While these are excellent standalone gloves, their breathable twin-liner makes them a perfect **base layer** under heavy chemical gauntlets for added comfort and sweat absorption.
- **Grip Maintenance:** If the sandy palm finish becomes clogged with heavy debris, a quick wipe with a damp cloth can restore the high-friction surface.
- **The Oil Test:** Use these in environments where "wicking" is a problem. You'll notice that because oils roll off the surface, the gloves stay lighter and cleaner for much longer than traditional jersey gloves.

Frequently Asked Questions (FAQs)

Q: Are these gloves suitable for cold weather?
A: Yes! The **twin liner technology** is specifically designed to trap a layer of air, which acts as natural insulation to keep hands warm without the bulk of a heavy winter glove.

Q: Do these gloves lose their liquid repellency after a few uses?
A: No. The liquid-repellent technology is integrated into the fibres, ensuring that water and oils continue to bead and roll off throughout the standard lifespan of the glove.

Q: Can these be used for precision assembly?
A: Absolutely. Despite being a "liner," the **sandy palm finish** provides enough tactile feedback and grip to handle small parts and tools securely.
