Fimap Bush for IMX Squeegee Lift Handle

Variant code: 16-438106

Fimap Bush for IMX Squeegee Lift Handle is a genuine replacement component designed for the **manual squeegee lifting mechanism** on **Fimap iMx series walk-behind scrubber dryers**, including the **iMx B** and **iMx BT** models. This precision-engineered bush supports the lift handle linkage, ensuring smooth and reliable movement when raising or lowering the rear squeegee assembly during machine operation, transport or maintenance.

Manufactured to Fimap's original specifications, the bush provides accurate alignment and reduces wear between moving components within the lift mechanism. By maintaining smooth pivoting action, it helps ensure the squeegee assembly can be lifted clear of the floor to prevent unnecessary blade wear when transporting the machine or when the vacuum system is not in use. Built from durable materials, it is designed to withstand the demands of everyday commercial cleaning environments while providing long-lasting performance.

As part of routine servicing, the squeegee lift linkage should be kept clean and free from debris to maintain smooth operation. Fimap's distinctive **yellow colour-coded maintenance touchpoints** help operators quickly identify serviceable components, making regular maintenance easier and more efficient.

Product Features

- **Genuine Fimap replacement bush**
- **OEM Part Number: 438106**
- Designed for **Fimap iMx, iMx B and iMx BT scrubber dryers**
- Supports the manual squeegee lift handle mechanism
- Ensures smooth lifting and lowering of the rear squeegee assembly
- Precision-engineered for accurate fit and reliable operation
- Durable construction for extended service life
- Direct replacement for easy installation
- Genuine Fimap replacement part

Product Benefits

- Restores smooth operation of the squeegee lift linkage
- Helps reduce wear within the lifting mechanism
- Supports correct positioning of the rear squeegee during transport
- Minimises machine downtime with simple replacement
- Improves reliability of the manual lift mechanism
- Provides long-lasting performance in demanding commercial environments

Technical Characteristics

- **Product Type:** Bush (Bushing)
- **Brand:** Fimap
- **OEM Part Number:** 438106
- **Machine Compatibility:** Fimap iMx, iMx B and iMx BT
- **Function:** Supports the manual squeegee lift handle linkage mechanism
- **Installation:** Direct Replacement
- **Maintenance:** Keep linkage clean and free from debris for smooth operation
- **Service Note:** Raise the squeegee assembly fully before fitting or removing the main scrub brush

Applications

The **Fimap Bush for IMX Squeegee Lift Handle** is designed for use with **Fimap iMx series walk-behind scrubber dryers**, including the **iMx B** and **iMx BT** models. It is ideal for replacing worn or damaged bushes within the manual squeegee lifting mechanism, helping maintain smooth and reliable operation of the rear squeegee assembly. Suitable for commercial cleaning environments such as **schools, hospitals, retail premises, offices, warehouses and public buildings**, it supports efficient machine operation while helping extend the service life of the squeegee lift mechanism.
