

Proton Quash – Pre-Wash Lipstick Remover – Refill Pack

Variant code: 04-P70601

The Quash Glass Pre-Treatment System Refill Pack ensures correct surface preparation before applying the Quash Glass Protection System. Quash develops specialist glass care solutions for environments where long-term clarity and reduced maintenance are important. Proper preparation directly affects coating performance, and this **glass pre-treatment solution** conditions the surface to achieve reliable adhesion and consistent results.

Before a protective coating bonds effectively, the glass must be free from residues, contaminants, and microscopic impurities. This formulation cleans and chemically prepares the surface, creating the correct foundation for the next stage of treatment. When used within the complete Quash system, it **supports coating adhesion**, promotes water repellency, and helps maintain surface clarity in high-moisture environments. The **refill pack format** allows continued system use without replacing the full kit, supporting efficient stock management and repeatable application standards.

Product Features

- Purpose-formulated **glass pre-treatment solution** for the Quash Glass Protection System
- Cleans and prepares glass prior to protective coating application
- Removes surface residues and contaminants that affect adhesion
- Designed for professional and trade installation use
- Supplied as a refill pack for ongoing system application
- Suitable for interior glazing exposed to regular moisture
- Supports consistent treatment performance

Product Benefits

- Helps maintain long-term performance of treated glass
- Reduces the risk of coating failure due to poor preparation
- Contributes to easier cleaning of shower and bathroom glass
- Supports sustained clarity in moisture-prone areas
- Enables cost-effective continuation of the treatment system
- Promotes consistent professional installation results

Technical Characteristics

- Use only as part of the complete Quash treatment process
- Apply to thoroughly cleaned and fully dried glass surfaces
- Follow manufacturer instructions for correct preparation sequence
- Ensure appropriate ventilation during application
- Store in a cool, dry environment away from direct sunlight
- Dispose of materials in accordance with local regulations

Applications

The Quash Glass Pre-Treatment System Refill Pack is intended for residential and commercial interiors where glass surfaces face regular exposure to water, soap residues, and mineral deposits. Typical applications include shower enclosures, wet rooms, hotel bathrooms, leisure facilities, and residential bathroom glazing. By preparing the surface correctly before coating, it supports consistent performance in environments where moisture and cleaning frequency place ongoing demands on treated glass.
