

Pro Cut Liner Glove – L – Yellow

Variant code: 22-A688YERL

Pro Cut Liner Glove – High-Visibility Yellow

The **Pro Cut Liner Glove in High-Visibility Yellow**. Engineered for professionals who refuse to compromise between protection and dexterity, this liner provides a formidable barrier against sharp edges while maintaining the tactile sensitivity needed for precision tasks.

Whether you're working in glass handling, metal fabrication, or high-risk construction, these gloves are your first line of defence. The vibrant yellow colour doesn't just look sharp – it ensures you are seen in low-light environments, significantly improving **onsite safety compliance**.

Key Features & Benefits

- **Superior Cut Resistance:** Crafted from high-performance polyethylene (HPPE) fibres, providing an exceptional strength-to-weight ratio.
- **High-Visibility Safety:** The bold yellow hue enhances hand visibility, crucial for signalling and avoiding accidents in busy industrial zones.
- **Seamless Comfort:** A 13-gauge seamless knit design prevents irritation and chafing during extended wear, offering a "second-skin" feel.
- **Breathable Design:** The lightweight fabric allows for maximum airflow, keeping hands cool and dry even during intensive manual labour.
- **Ambidextrous & Versatile:** Fits either hand for quick donning and can be worn as a standalone glove or as a protective liner under nitrile or latex gloves.

Technical Specifications

Feature	Specification
---------	---------------

Feature	Specification
Material	HPPE / Synthetic Fiber Blend
Colour	High-Visibility Yellow
Gauge	13-Gauge Seamless Knit
Washable	Yes (Machine Washable)
Cuff Style	Elasticated Knit Wrist

Hints for Optimal Use

Layering for Chemicals: If you are working with oils or chemicals, wear these liners under a disposable nitrile glove. You'll get the chemical protection of the outer layer with the cut protection of the liner.

Sizing Matters: A snug fit is essential for cut protection. If the glove is too loose, the fabric may snag; if too tight, it may reduce your range of motion.

Inspection: Always inspect your liners before a shift. If you notice fraying or deep nicks in the fiber, it's time for a replacement to ensure maximum safety.

Frequently Asked Questions (FAQ)

Q: Are these gloves puncture-proof?A: While these gloves offer high levels of **cut resistance**, they are not puncture-proof. They are designed to protect against slicing motions rather than direct needle or spike penetrations.

Q: Can I wash the Pro Cut Liners?A: Yes! These liners are machine washable. We recommend washing them in cool water and air-drying to maintain the integrity of the HPPE fibres.

Q: What industries are these best suited for?A: They are ideal for **aerospace, automotive assembly, glass manufacturing, HVAC installation, and recycling plants**.

Why Experts Choose Pro Cut Yellow

In the world of **Personal Protective Equipment (PPE)**, visibility is as important as physical durability. The Pro Cut Liner Glove combines **ANSI-rated cut protection** with a design that minimises hand fatigue. For safety officers looking to reduce workplace injuries, these gloves are a top-tier recommendation for their reliability and ease of use.

Pro-Tip: Integrating high-vis gear into your uniform has been shown to reduce "struck-by" accidents in warehouse environments by up to 25%.
