PVA Hygiene Washroom Cleaner Soluble Sachets - Washroom Cleaner Concentrate - Pack of 20

Variant code: 07-B120S

PVA Hygiene Washroom Cleaner Soluble Sachets are a **concentrated washroom cleaning solution** designed for use with trigger spray bottles in professional cleaning environments. Manufactured by PVA Hygiene, a supplier focused on structured chemical systems and compliant hygiene solutions, these sachets support accurate dosing, consistent cleaning performance and safe chemical handling across commercial washroom operations.

Each sachet is **pre-measured for controlled dilution**, allowing operatives to create a ready-to-use solution quickly and consistently without manual measuring. Designed for use with standard trigger spray bottles, the system supports efficient application across washroom surfaces such as sinks, tiles, fixtures and fittings. This ensures reliable cleaning results while helping maintain hygiene standards in high-traffic environments.

The compact sachet format improves storage efficiency and reduces packaging compared to traditional liquid cleaning products. By standardising dilution, the system minimises the risk of incorrect dosing and supports COSHH-compliant processes. It integrates easily into existing cleaning workflows, making it suitable for routine cleaning schedules where consistency and efficiency are essential.

Product Features

- **Pre-measured soluble sachets** for washroom cleaning
- Designed for use with trigger spray bottles
- Produces ready-to-use cleaning solution when diluted
- Suitable for sinks, tiles, fixtures and general washroom surfaces
- Eliminates need for manual chemical measuring
- Compact and easy-to-store format
- Manufactured by **PVA Hygiene**

Product Benefits

- Ensures consistent dilution and cleaning performance
- Reduces risk of incorrect chemical dosing
- Supports hygiene standards in washroom environments
- Improves efficiency in routine cleaning tasks
- Supports COSHH-compliant handling and safety procedures
- Reduces storage space and packaging requirements

Technical Characteristics

- Designed to dissolve fully in water before use
- Use with compatible trigger spray bottle systems
- Follow manufacturer dilution instructions
- Store in a dry environment prior to use
- Avoid exposure to moisture before application
- Dispose of packaging in accordance with local regulations

Applications

PVA Hygiene Washroom Cleaner Soluble Sachets are suitable for use in commercial washrooms across sectors including facilities management, healthcare, education, hospitality and public buildings. They are particularly effective for routine cleaning of sinks, tiles, fittings and general surfaces in washroom environments. The sachet system supports efficient cleaning workflows, helping maintain hygiene standards and consistent results in high-use areas.
