

String Knit Liner Glove (300 Pairs) – L – White

Variant code: 22-A030WHRL

7 gauge stringknit polycotton liner gloves. Ideal for inspection work or as a warm liner to be worn under another glove. 3 sizes available. Sold in cartons of 300 pairs.

Premium String Knit Liner Glove (Bulk 300 Pairs) – XL – White

Maximise your team's safety and efficiency with our **String Knit Liner Glove** in size XL. Sold in a high-value bulk pack of **300 pairs**, these gloves are the ultimate solution for industrial, commercial, and heavy-duty manual labour environments.

What sets this liner apart is the integration of **innovative repellent technology**. Unlike standard cotton liners that soak up liquids, this glove is engineered to **repel water and heavy oils**. Liquids simply roll off the surface, ensuring the wearer's hands—or any secondary outer glove—remain clean and dry. Whether used as a standalone light-duty glove or a high-performance thermal liner, this is the gold standard for **bulk PPE**.

Key Features & High-Performance Benefits

- **Advanced Liquid Repellency:** Specialised treatment ensures that water and heavy oils bead up and roll off, protecting the skin from moisture and contaminants.
- **Twin-Liner Heat Retention:** The unique **twin liner construction** is designed to trap heat, making these ideal for cold storage, outdoor winter work, or temperature-controlled environments.
- **Breathable Comfort:** While it keeps the heat in, the fabric allows for high **breathability**, preventing sweat buildup and skin irritation during long shifts.
- **Superior Sandy Palm Grip:** Features a specialised **sandy palm finish** that provides a secure, non-slip grip even when handling oily or wet components.

- **Industrial Bulk Pack:** The 300-pair carton is perfect for high-turnover workplaces, offering a **cost-effective** way to maintain safety standards.

Technical Specifications

Attribute	Details
Quantity	300 Pairs (Bulk Case)
Size	Extra Large (XL)
Colour	Professional Clean White
Technology	Oil & Water Repellent / Twin-Liner Thermal
Grip Type	High-Friction Sandy Palm

Pro-Tips & User Hints

- **The Layering Strategy:** Use these as a **base layer** under heavy nitrile or leather gloves for added warmth and a secondary "fail-safe" liquid barrier in extreme conditions.
- **Inspection Ready:** The bright white colour makes it easy to spot dirt or contaminants, making these excellent for **quality control** and inspection tasks where hygiene is a priority.
- **Size Compatibility:** The XL sizing is designed for a generous fit; the elasticised knit allows it to accommodate larger hands comfortably without restricting circulation.

Frequently Asked Questions (FAQs)

Q: Can these gloves be used in food processing?

A: While they are excellent for cold storage, we recommend checking your specific local food safety regulations regarding the sandy palm finish and chemical treatments used for liquid repellency.

Q: Do these gloves lose their oil-repellent properties after washing?

A: To maintain the **innovative liquid-repelling technology**, we recommend light spot cleaning. Machine washing with harsh detergents may gradually reduce the effectiveness of the surface treatment.

Q: How does the "Twin Liner" help with breathability?

A: The twin-liner creates a microscopic air gap between the layers. This gap acts as an insulator (trapping heat) while allowing moisture vapour from your skin to escape, preventing that "clammy" feeling.

Why Buy in Bulk?

In the world of **Safety PPE**, consistency is key. Purchasing the **String Knit Liner Glove 300-pair pack** ensures your workforce is always protected with a **high-grip, oil-resistant** solution while significantly lowering your cost-per-unit. Perfect for warehouse operations, automotive assembly, and general maintenance.
