Superior Welding Gaunlets - Green

Variant code: 22-WELDG

Superior Welding Gauntlets – Forest Green

The Ultimate Shield for Precision and Protection

When the sparks fly and the heat rises, your hands shouldn't be the weak link in your workflow. Our **Superior Welding Gauntlets in Forest Green** are engineered for the professional welder who demands a balance of rugged durability, high-thermal resistance, and "broken-in" comfort from day one.

Crafted from premium-grade, split-cowhide leather, these gloves provide an impenetrable barrier against molten splash, UV radiation, and extreme temperatures, making them a staple for **MIG, Stick, and heavy-duty metal fabrication.**

Key Features & Benefits

- **Grade-A Split Cowhide Leather:** Selected for its dense fibre structure, offering superior abrasion and puncture resistance.
- **Heat-Deflecting Thermal Lining:** Features a full fleece and cotton interior that wicks sweat and provides a buffer against radiant heat.
- **Kevlar® Stitched Seams:** Reinforced with flame-retardant DuPont™ Kevlar® threading to prevent seam failure near open flames or hot slag.
- **Extended Safety Cuff:** The 14-inch gauntlet style protects your wrists and forearms from sparks and grinding debris.
- **Reinforced Wing Thumb:** Ergonomically designed for natural grip, reducing hand fatigue during long shifts and providing extra durability in high-wear areas.

Technical Specifications

Feature	Specification
Material	Premium Split Cowhide Leather
Colour	Forest Green
Stitching	Heat-resistant Kevlar®
Lining	Soft Cotton/Fleece Composite
Length	14 Inches (35cm)
Size	One Size Fits Most (Large/XL)

Pro-Tips for Longevity

1. **Avoid Water:** Leather stiffens and cracks after being soaked. If they get wet, air-dry them slowly away from direct heat sources.
2. **Storage:** Store your gauntlets in a cool, dry place. Hanging them by the cuff helps maintain their shape and allows moisture from sweat to evaporate.
3. **Rotation:** If you weld daily, rotating between two pairs allows the leather fibres to recover and extends the life of both pairs.

Frequently Asked Questions (FAQ)

Q: Are these gloves suitable for TIG welding?

A: While these provide excellent protection, TIG welding usually requires more dexterity. These gauntlets are optimised for **MIG and Stick welding** where heat protection is the priority. For TIG, we recommend our goatskin range.

Q: Do they protect against electrical shocks?

A: Leather provides some natural insulation, but these are designed for **thermal and mechanical protection**, not as primary electrical insulation. Always follow standard welding safety protocols.

Q: How do I clean my welding gauntlets?

A: Do not machine wash. Use a stiff brush to remove surface slag and dirt. For deep cleans, use a specialised leather cleaner or a damp cloth with mild saddle soap.

Why Choose Our Forest Green Gauntlets?

Beyond the technical specs, these gloves are designed for the "shop life." The deep forest green dye isn't just for looks - it hides soot, oil, and grime better than traditional grey or tan gloves, keeping your gear looking professional for longer. Whether you are a hobbyist in the garage or a pro on the pipeline, these are the heavy-duty protectors your hands deserve.
