Windmill - Touch Clean - Antibacterial Lotion Soap - 1L

Variant code: 10-810

Windmill - Touch Clean - Antibacterial Lotion Soap - 1L: The Ultimate Hand Hygiene Solution

Elevate your hand hygiene standards with the **Windmill - Touch Clean - Antibacterial Lotion Soap - 1L** from AUK Hygiene. This premium, liquid **antibacterial hand soap** delivers powerful germ-killing action paired with a mild, skin-friendly formulation, making it the ideal choice for high-traffic environments where handwashing is frequent and essential.

Key Features & Benefits

- **Powerful Antibacterial Action:** Effectively removes dirt, grease, and grime while killing germs, offering **superior protection** against common bacteria.
- **Gentle on Skin:** Contains **skin conditioning agents** and a mild formula to prevent the drying, cracking, and irritation often associated with harsh soaps, making it suitable for **sensitive skin** and frequent daily use.
- **Rich, Luxurious Lather:** A small quantity is all it takes to generate a **rich, creamy lather** in both hot and cold water, ensuring a thorough and satisfying handwashing experience.
- **Economical 1L Size:** The practical 1L size is perfect for refilling **bulk fill soap dispensers** in commercial, industrial, healthcare, and educational settings, providing a **cost-effective** hand hygiene solution.
- **Versatile Use:** Ideal for washrooms, kitchens, food preparation areas, offices, schools, and any workplace prioritizing a high standard of **professional hygiene**.

Why Choose Soap and Water Over

Alcohol Hand Sanitiser? The Touch Clean Advantage

While standard **alcohol hand sanitiser** (often 60%+ alcohol content) is convenient for on-the-go use, it's not a replacement for proper **handwashing** with soap and water—especially when hands are visibly dirty or greasy.[2] The **Windmill Touch Clean Lotion Soap** offers distinct benefits that surpass the limitations of alcohol rubs:

Feature	Windmill Touch Clean Soap & Water	Standard Alcohol Sanitiser
Effectiveness on Dirty/Greasy Hands	**Highly Effective**: Removes all types of soil, grease, and chemicals.	**Reduced Effectiveness**: Not effective when hands are visibly dirty or greasy.
Germ Removal	**Removes** *and* **kills** a broad spectrum of germs, including norovirus and *C. difficile* spores (which alcohol often can't eliminate).	Primarily inactivates or kills certain germs; does not remove dirt or all germ types.

Skin Condition | Kinder to Skin: Milder formulation with moisturisers helps prevent dryness and cracking from overuse. | Can cause skin dryness and irritation with frequent, repetitive use due to high alcohol content.

Safety | Non-flammable; low ingestion risk. | High alcohol content presents a fire risk and is toxic if ingested (requires adult supervision for children).

Chemical Removal | Effectively removes harmful chemicals like pesticides and heavy metals. | Ineffective at removing most harmful chemicals.

For a **deep clean** that removes dirt and provides broad-spectrum hygienic action, **hand soap and water** is always the primary recommendation from public health bodies.

Frequently Asked Questions (FAQ)

Tel: 01626 355177
Email: info@aukhygiene.com

What is the Windmill Touch Clean Antibacterial Lotion Soap used for?

The soap is used for routine and hygienic **handwashing** in commercial, industrial, and public environments. Its **antibacterial** properties make it suitable for areas where germ control is essential, such as **food preparation**, healthcare, schools, and offices.

What is the difference between lotion soap and foam soap?

Lotion soap is a viscous, liquid formula that creates a rich, creamy lather when mixed with water. **Foam soap** is pre-lathered as it is dispensed from a specialised dispenser. Both are effective, but lotion soap often feels more luxurious and is typically used in standard liquid or bulk-fill dispensers.

Is this soap suitable for frequent use or sensitive skin?

Yes. The **Windmill Touch Clean** formula is designed to be **mild** and includes **moisturising agents** (such as glycerine, if applicable) to counteract the drying effects of frequent handwashing, making it a better choice than harsh or highly fragranced products for repeated use throughout the day.

Can I use this soap in any dispenser?

This 1L size is typically designed as a **bulk-fill** product for use in most standard liquid soap dispensers. Always confirm the compatibility of your dispenser to ensure proper functioning.

Does this soap require hot or cold water?

The soap is formulated to generate a rich lather and clean effectively with **both hot and cold water**. However, ensure the water is clean and running for the best hygienic results. The duration of washing (at least 20 seconds) is more important than the water temperature.

Property	Value
Colour	Blue
