

Touchscreen Knit Glove – S/M – Navy

Variant code: 22-GL16NARS/M

The Premium Navy Touchscreen Knit Glove

Upgrade your winter essentials with our **Touchscreen Knit Gloves in Deep Navy**. While black is a classic, Navy Blue offers a sophisticated, versatile alternative that pairs perfectly with denim, grey overcoats, and professional camel-toned outerwear.

Designed for the modern professional and the weekend adventurer alike, these gloves ensure you stay connected to your digital world without the "frostbite risk." From checking emails on a chilly commute to snapping the perfect winter landscape photo, these gloves offer the tactile precision of bare skin with the warmth of premium thermal knit.

Key Features & Benefits

- **Tri-Finger Connectivity:** Advanced conductive silver-nylon fibres are woven into the **thumb, index, and middle fingers**, allowing for multi-touch gestures, zooming, and effortless typing.
- **Refined Navy Aesthetic:** A rich, midnight navy hue that resists fading and offers a more textured, premium look than standard black gloves.
- **Micro-Brushed Interior:** The inside of each glove features a soft, brushed finish that feels like cashmere against the skin, providing instant warmth the moment you slip them on.
- **Flexible Ribbed Cuffs:** The extended, double-thick ribbed wrist cuffs lock in heat and prevent cold air or snow from creeping into your sleeves.
- **Anti-Pill Fabric:** High-density knit construction prevents those annoying "fuzz balls" from forming, keeping your gloves looking brand new season after season.

Technical Specifications

Feature	Details
Material	80% Thermal Acrylic, 15% Spandex, 5% Conductive Yarn
Colour	Deep Navy / Midnight Blue
Device Support	All Capacitive Screens (iOS, Android, Windows)
Grip Type	High-Friction Knit Weave
Weight	Lightweight & Pocket-Portable

Hints & Pro-Tips for Longevity

- **The "Zero Gap" Rule:** To ensure 100% accuracy while texting, make sure your fingertips reach the very top of the glove. This creates a solid circuit between your finger and the screen.
- **Avoid High Heat:** When drying your gloves after a snowy day, avoid placing them directly on a hot radiator. High heat can degrade the spandex and conductive fibres. Air drying is best!
- **Style Pairing:** Navy gloves are the "secret weapon" of style; they look significantly more expensive when paired with a matching navy scarf or a contrasting charcoal grey coat.

Frequently Asked Questions (FAQ)

Q: Are these gloves thick enough for sub-zero temperatures? **A:** These gloves are optimised for **everyday winter use** (commuting, walking, driving). For extreme arctic conditions or prolonged snow play, we recommend using them as a high-tech liner inside a heavy-duty waterproof mitten.

Q: Do they lose their touchscreen ability over time? **A:** No. Unlike some brands that use a "topical coating" that rubs off, our conductive fibres are **woven into the fabric**, ensuring the touchscreen functionality lasts for the life of the glove.

Q: Are they "itchy" like wool? **A:** Not at all. We use a high-grade soft acrylic blend designed specifically to be hypoallergenic and smooth

against sensitive skin.

Q: Can I use these for driving? A: Yes! The knit texture provides a natural grip on leather and plastic steering wheels, and they work perfectly with in-car GPS touchscreens.

Why the Navy Knit Glove is a Winter Essential

In an era where AI-integrated devices and smart tech dominate our daily lives, having gear that bridges the gap between the physical and digital world is vital. Our Navy Touchscreen Gloves are designed to be "invisible tech"—they look like high-end fashion but perform like high-end hardware.
