Ultra High Speed Floor Pad Natural Fibre - 17"

Variant code: 03-F17NT

The **Ultra High Speed Natural Fibre Floor Pad - 17"** is a professional floor buffing pad designed for **moderate buffing and finishing floors after crystallisation**. Manufactured from a combination of **virgin polyester, natural bristles and a special elastic resin**, the pad provides a durable and flexible construction for maintaining the appearance of suitable hard flooring. Its **17" (432mm) diameter** makes it suitable for compatible rotary floor buffing machines.

The combination of **natural bristles and polyester fibres** provides a practical balance of durability and flexibility during floor maintenance. The special elastic resin helps maintain the pad's structure while allowing it to adapt to the floor surface during operation. Designed for use with **rotary buffing machines operating at 600 RPM**, the pad supports moderate polishing and the final finishing stage following suitable floor crystallisation treatments.

Ideal for **professional floor care and maintenance**, this natural fibre pad helps improve the appearance of treated hard floors through mechanical buffing. It is particularly useful where floors require **final polishing after crystallisation** or moderate buffing as part of an established maintenance programme. The pad can be **rinsed after use** to remove accumulated residue, helping maintain its condition for subsequent cleaning and polishing operations.

Product Features

- **Natural fibre floor buffing pad** for professional floor maintenance
- **17" (432mm) diameter** for compatible rotary buffing machines
- Manufactured from **virgin polyester and natural bristles**
- Incorporates a **special elastic resin** for durability and flexibility
- Suitable for **moderate floor buffing**
- Designed for **final floor finishing after crystallisation**
- Compatible with **rotary buffing machines operating at 600 RPM**
- **Durable construction** for professional

floor maintenance applications
- **Flexible pad structure** supports effective contact during buffing
- Helps maintain the appearance of **suitable treated hard floors**
- **Rinseable after use** for convenient maintenance
- Suitable for **commercial and professional floor polishing programmes**

Product Benefits

- **Natural bristles combined with virgin polyester provide a durable and flexible floor buffing pad for professional maintenance**
- **Suitable for moderate buffing and final finishing after crystallisation, helping enhance the appearance of treated hard floors**
- **Designed for rotary buffing machines operating at 600 RPM, providing a suitable accessory for compatible professional floor care equipment**
- **Special elastic resin construction** helps maintain pad flexibility during use
- **Natural fibre composition** provides effective mechanical buffing action
- **17-inch diameter** allows use with appropriately sized floor buffing equipment
- **Crystallisation finishing suitability** supports professional floor restoration and maintenance procedures
- **Rinseable design** allows accumulated polishing residue to be removed after use
- Supports **consistent floor appearance maintenance** in commercial environments
- Provides a practical solution for **moderate polishing and final floor finishing**

Technical Characteristics

- **Product Type:** Natural Fibre Floor Buffing Pad
- **Pad Classification:** High Speed
- **Pad Diameter:** 17" (431.8mm)
- **Material Composition:** Virgin Polyester and Natural Bristles
- **Binding Material:** Special Elastic Resin
- **Construction:** Durable and Flexible
- **Machine Compatibility:** Compatible Rotary Floor Buffing Machines

- **Specified Operating Speed:** 600 RPM
- **Primary Application:** Moderate Floor Buffing
- **Additional Application:** Final Floor Finishing After Crystallisation
- **Rinse After Use:** Yes
- **Pad Weight:** 152g

Applications

The **Ultra High Speed Natural Fibre Floor Pad - 17"** is designed for **moderate buffing and final floor finishing after crystallisation** in professional environments such as **hotels, offices, shopping centres, retail premises, public buildings and commercial facilities**. Its combination of **natural bristles, virgin polyester and elastic resin** provides a flexible buffing surface for maintaining suitable hard floors. When used with a **compatible 17-inch rotary buffing machine operating at 600 RPM**, the pad supports professional floor finishing and maintenance procedures. It is particularly useful after appropriate crystallisation treatments, where final buffing helps improve the appearance of the treated surface. For best results, follow the flooring and equipment manufacturers' recommendations, confirm compatibility with the floor finish and rinse the pad after use.
