P-Wave Easy Fresh Fan Air Freshener Unit (Requires C Battery) - Each

Variant code: 05-105261W

Easy Fresh Fan Air Freshener Dispenser is a compact, battery-operated air freshening unit designed to provide **consistent, non-aerosol fragrance distribution** in washrooms and other indoor spaces. Its discreet, smoke detector-style appearance allows it to blend into commercial and domestic environments, making it a practical choice for offices, schools, hospitality venues and shared facilities. Working with compatible **Easy Fresh scented fragrance covers**, the fan helps circulate fragrance throughout the surrounding area without the need for aerosol sprays or liquid air fresheners.

Featuring an intelligent **light-activated fan system**, the dispenser automatically operates when the room is illuminated and powers down when the lights are switched off to conserve battery life. Its smart programme gradually increases fan activity as the fragrance cover ages, helping maintain **consistent fragrance intensity throughout the 30-day replacement cycle**. When fitted with a compatible scented cover, the system can freshen areas of up to **25m²**. A **flashing LED indicator and audible alert** notify users when maintenance is required, helping ensure the dispenser continues operating effectively.

Designed for **simple installation and low-maintenance operation**, the fan unit can be mounted on a wall or ceiling at a suitable height. It operates using **one C-size battery**, eliminating the need for mains electricity or electrical wiring. Unlike disposable air fresheners, the **fan unit is reusable** and only the scented cover needs replacing approximately every 30 days. Compatible covers use **dry fragrance technology**, contain up to 15% recycled material and are recyclable where suitable facilities exist. Supplied as **one fan dispenser unit**, with the battery and fragrance cover required separately.

Product Features

- **Battery-operated air freshener fan** designed for continuous indoor fragrance
